Websocket Echo server IRIS

In Caché you had an example of a WebSocket Server in namespace SAMPLES
With IRIS the samples are gone and require additional installation effort.

So I refurbished the code with some useful additions:

- independent of namespace
- timeout control from client
- readable communication log

This contains 2 classes:

- rcc.EchoServer.cls
- rcc.WSScsp.cls for testing. Called from Browser by (<http://localhost:52773/csp/user/rcc.WSScsp.cls>)

The server is essential for the 'native' WebSocket Client Demo
