## Loop over %session.object in CSP Application

Hi,

I have sample %session like this

```
%session.Data("product", "1") = "Product 1"
```

```
%session.Data("product", "2") = "Product 2"
```

```
%session.Data("product", "3") = "Product 3"
```

```
%session.Data("product", "4") = "Product 4"
```

```
%session.Data("product", "5") = "Product 5"
```

How can i loop in tag based CSP application over %session?

if i have <csp:while condtion=""> Is there something like %session.Data("products").Next() ?
