How to use Base64 to encrypt a string that exceeds the maximum length of string type

Now I want to return a large amount of data to the front end. The string length has reached 40000 +, and the returned data needs to be encrypted by **AES + Base64**. I can convert the string into a stream. AES can use the **AESCBCEncryptStream** method to encrypt, but Base64 has no stream method. Anyone who get the solution would you kindly share the solution please.

Any help would be appreciated. Thanks!
