Error while importing package manager XML file in IRIS instance in Windows 10

Hi, I have installed IRIS community version in my laptop which has Windows 10 OS, also I am already using Healthshare (Cache for Windows (x86-64) 2017.2.1 (Build 801318178U)) in the same laptop. I tried to import objectscript package manager XML file which is downloaded from <https://pm.community.intersystems.com/packages/zpm/latest/installer> . I am getting below output which installation failed. Please help to fix this. Thanks in advance -----

```
----- Importing Selected Classes from
