How to issue correct paging query to get dataset from external database

Hi,

I issue a sql like follow:

```
select *, %vid from (select * from orderinfo) where %vid between 1 and 10
```

I got error

```
[SQLCODE: <-400>:<Fatal error occurred>]
```

```
[%msg: <Remote JDBC error: ORA-00911: invalid character >]
```

So ,what's the correct paging syntax for query external data?

Tks.
