Failed to acquire exclusive lock error

Hi all,

I have a class that has been working so far :(

The class extends the `EnsLib.RecordMap.Service.FTPService` class and add some information for each rows.

Now, when it saves the object it is raising the following error

ERROR #5803: Failed to acquire exclusive lock error

I've seen the other question in the community and I've tried to unlock
do `##class(my.class).%UnlockExtent(0,1)`
but it doesn't work

Any idea?

Best regards
