## XPATH Query with compound critiera

I'm looking for any codes that match my parameter that we have received since 1/01/2020 based on the FromTime, EnteredOn or Status (if both are empty).

```
(Problem[Problem/Code='%1' and FromTime>"2020-01-01"]) | (Problem[Problem/Code='%1' and  
(count(FromTime)=0 or FromTime="") and EnteredOn>"2020-01-01"])  
| (Problem[Problem/Code='%1' and (count(FromTime)=0 or FromTime="") and (count(EnteredOn)=0 or  
EnteredOn="") and Status/Description="Active"])
```

This works like a charm with standard XPATH query tools but HS does not like it.
