## SQL Statement Highlighting

Hey Community,

my Caché Version: 2013.1 and can't update now.

is it possible to highlight SQL Statements like in embedded SQL with all the features from SQL Statements?

Actually I use SQL Statements with a simple string like:

```
set myquery = "SELECT TOP 5 Name,DOB AS bdate,FavoriteColors FROM Sample.Person"
```

But when the queries are more complex it will be very cluttered and unstructured.

It would be nicer if I could set line breaks (I know here could I use indexed variables) and have highlighting like in an embedded SQL:

```
&sql(
```

```
    SELECT TOP 5 Name,DOB AS bdate,FavoriteColors  
    FROM Sample.Person
```

```
)
```

Best regards!
