Is there a way to change / renew the session cookie once this is created?

Product is Caché
Version is 2018.1

Hi

I'm working in a security issue of the system that says that once you are logged into a session and you save this cookie. You can go to another navigator and use this cookie to be registered.

I would like to change this cookie once user is logged into my system but I can't log out and login again because all my cookies are removed.

Is there a way to change to cookie or renew it?

Thanks a lot.
