Starting caché without automatic WIJ recovery in non-interactive way

After the database is restored, the WIJ file may be incompatible, so I deleted the WIJ file, and it needs to be set manually at startup

message in cconsole.log:

```
Enter Cache' with
    csession CACHE2016 -B
and Do ^STURECOV for help recovering from the errors
```

after command " Do ^STURECOV":

```
%SYS>Do ^STURECOV
```

Journal recovery options

```
-----
1) Display the list of errors from startup
2) Run the journal restore again
3) Bring up the system in multi-user mode (includes journal restore)
4) Dismount a database
5) Mount a database
6) Database Repair Utility
7) Check Database Integrity
8) Reset system so journal is not restored at startup
9) Display instructions on how to shut down the system
10) Display Journaling Menu (^JOURNAL)
-----
H) Display Help
E) Exit this utility
-----
```

This is an interactive way, is there a non-interactive way to do this?
