Data transform: Using function set to change values but doesnt seem to work

Hi,

Would appreciate some guidance on this. I am creating a transform to replace values using a functionset. But for some reason the values arent getting replaced. What I want to do is to replace if the observation value [For Eg: if Migraine should replace with M1]

```
<assign value=
'##class(ClassName.FunctionSe
t).illnesConv(source.{OBX():ObservationValue})' property='target.{OBX():ObservationValue}' action='set' />
```

My function set class is as below:

```
ClassMethod illnesConv(observationValue As %String) As %String [ Final ]
{
set ret = ""
set ^TEST("observation") = observationValue
if observationValue = "Migraine"
{
set ret = "M1"
}
quit ret
}
```

Shouldnt this replace the value? Would appreciate some guidance on what I am doing wrong.
