## HealthShare 2020.1 now available

### HealthShare 2020.1 is now Generally Available!

The 2020.1 release has many exciting features including:

- Support for HL7® FHIR® Release 4, including mapping of InterSystems SDA to FHIR R4
- North American customers can access to the CommonWell® health data network, including integration with the HealthShare Unified Care Record and Clinical Viewer
- New Clinical Viewer enhancements, including configurations to display icons and specific filtered views for COVID-19 testing status
- Clinical Viewer audits showing when a user accessed a patient ' s information
- Separate kits for Unified Care Record and Clinical Viewer to allow more flexible update options
- Simpler/faster user experience for clinical and administrative users with new navigation, application chooser, and system utility menu (initial version, expanding to include more applications in the next releases)
- Health Insight now built on IRIS for Health™, with improved performance and scalability
- Health Insight streamlined upgrade protocols to significantly reduce downtime during version upgrades
- Health Insight data consistency check tool enhancements, including new features and updated dashboards
- Provider Directory push service to publish newly updated provider records to FHIR repository and to external systems
- Personal Community login can use login credentials from external systems.
- Integrated Healthwise® educational content available in Personal Community
- Patient-completed forms and questionnaires from Personal Community can be accessed directly in InterSystems TrakCare®.
