How could we install zpm?

Hello,

We have read the installation guide to get started with zpm package manager:

<https://openexchange.intersystems.com/package/ObjectScript-Package-Manag...>

We wonder what means the second step:

"Import the zpm.xml into IRIS and compile via any desired way (Management Portal, Studio or Terminal)"

We have thought that it means to place the zpm-0.2.2.xml file inside
"C:\InterSystems\HealthShare2\bpt\contenedor"

Then in the terminal, go inside one namespace:

```
zn "esbsscc"
```

After that we load and compile the .xml:

```
write $SYSTEM.OBJ.Load("C:\InterSystems\HealthShare2\bpt\contenedor\zpm-0.2.2.xml")
```

The terminal outputs:

```
Loading file C:\InterSystems\HealthShare2\bpt\contenedor\zpm-0.2.2.xml as xml
```

```
Imported class: %ZPM.Installer
```

```
Load finished successfully.
```

```
1
```

However, when we try to verify that it is installed:

```
zpm
```

```
ZPM
```

```
^
```

```
<SYNTAX>
```

What are the steps to install zpm package manager?

How could we install zpm?
