How to open IRIS terminal with docker in a particular NAMESPACE

Hi folks!

When I start IRIS in docker every time I do the following:

```
$ docker-compose up -d --build
```

```
$ docker-compose exec iris iris session iris
```

```
USER>zn "NAMESPACEINeed"
```

Is it possible to have an open terminal command connect to a particular namespace?

[#Docker](#) [#Namespace](#) [#Terminal](#) [#InterSystems](#) [IRIS](#)
