## How can I check that the value is String or Integer or Date?

I have the variable with literal.

Can I understand with ObjectScript that the literal is:

%String,

or %Integer,

or %Date,

or %Double,

or %Numeric?

What I'm looking for could be:

```
set variable="To be or not to be"
```

```
USER>w ##class(utils).GetType(variable)
```

```
%String
```

```
set variable=42
```

```
USER>w ##class(utils).GetType(variable)
```

```
%Integer
```
