Updating a Property from Javascript

I am trying to set a variable/property within JavaScript and use the value in my method. The alert method below returns "0". Do I have the syntax wrong?

```
/// Storage for current table row
```

```
Property currentTableRow As %ZEN.Datatype.string [ InitialExpression = 0 ];
```

```
set ..currentTableRow = "1"
```

```
&js<
```

```
    alert(zenPage.currentTableRow);  
>
```
