## No Suitable Driver Found for jdbc:Cache://ipaddress:port/namespace

Hi Guys,

I am trying to pull data from CacheDB and push into elasticsearch using logstash. In the configuration file i am giving the following. But it is throwing error No Suitable Driver Found for jdbc:Cache://ipaddress:port/namespace. Could anyone please help to resolve this ? I tried both JDK17 and JDK18 but no luck.

My Config file is as follows

```
input {
  jdbc {
    cleanrun => true
    jdbcdriverlibrary => "C:/InterSystems/Cache/dev/java/lib/JDK17/cache-jdbc-2.0.0.jar"
    jdbcdriverclass => "com.intersys.jdbc.CacheDriver"
    jdbcconnectionstring => "jdbc:Cache://ipaddress:1972/PC61T"
    jdbcuser => "dialup"
    jdbcpassword => "****"
    schedule => "* * * * *"
    statement => "SELECT * FROM AEADOCTOR "
  }
}
output {
  elasticsearch {
    hosts => ["localhost:9200"]
    index => "cachesql"
  }
}
stdout { codec => rubydebug }
```
