How to record request source ip in BP and BO and limit request qps?

Hi,

 Recently, I meet some problem at product env.

Some outside http request send to my Business Service. cause service very slow down. So I want find root cause . But at the message trace page. I can't found any source address . But at Product env. I can't install packet capturer like wireshark . I meet some problem.

And Second. Does ensemble can limit request speed at Business Service? too many requests slowdown my service.

Tks.
