Message Queues

Hi

I was experiencing an issue yesterday where I had over 900 messages in the queue. I had to filter and delete only A31 messages out of the queue allowing the rest of them to be processed. I tried to use SQL to set the status of the message to 'Suspended' however the A31 messages still remained on the queue and I had to suspend manually by going through each message. Is there a way of Suspending or Aborting only certain type of messages in a queue. I started with a SQL statement even though the status gets updated to suspended the message remains in the queue tab, how do I remove the message from the queue? Thank you for your help.

update
Ens.MessageHeader
Set Status ='Suspended' WHERE ID =(
SELECT
Ens.MessageHeader.ID
FROM Ens.MessageHeader inner join EnsLibHL7.Message

on EnsLibHL7.Message.ID=
Ens.MessageHeader.MessageBodyId
WHERE
Ens.MessageHeader.TargetConfigName ='OperationName' and
EnsLibHL7.Message.name ='ADTA31' and Ens.MessageHeader.Status='Queued')

Kind Regards,

Salma
