Cloud API Maturity Model using InterSystems IRIS

APIs are fuel powering the customer-driven platform revolution

In 2017, Forbes published an article talking about API Economy (see:

<https://www.forbes.com/sites/louiscolumbus/2017/01/29/2017-is-quickly-becoming-the-year-of-the-api-economy/>).

This article was the trigger to popularize the use of API and API Management by large companies. The article published a maturity model. My understanding is that InterSystems IRIS allows you to reach the top of the pyramid with your current technologies. See the figure above.

For this it is important to combine % CSP.REST package, IRIS API Manager (IAM), ML Pack and IntegratedML, Native API for Python, BPL and interoperability adapters.
