LDAP and Healthshare

Hi All,

I was just wondering whether anyone can help, I have managed to configure LDAP within Healthshare [HealthShare Modules:Core:15.032.9688], and I am also able to login with my LDAP user. However, I am unable to assign any roles to this user, the user appears on the users page however, it does not appear in the dropdown list of users when you try to update a particular role in the roles page (I am not sure where I have gone wrong with this). I can login with the user but I don't get any where far with it because it has no roles assigned to it. Any help would be great.

Kind Regards,

Salma
