How to add POST Body data to Net.HttpRequest

Hi, how do I add the POST body content to my Net.HttpRequest (It's not a key value pair, I am posting my own JSON to the remote server because it needs JSON in the body):

```
set httpRequest=##class(%Net.HttpRequest).%New()

set httpRequest.Https=1
set httpRequest.Server="redacted.azurewebsites.net"
set AbsolutePath="/api/redacted"
set QueryString="?operation=redacted&id=redacted"

 set status=httpRequest.Post(AbsolutePath_QueryString)
```

But how to add the Body to the request?

For the sake of this post, the body could be:

{ "MyKey":"MyValue" }

but in reality it's a highly nested, valid, JSON string.

I've looked at the API but can't make sense of it
