## Developer Community Release, July 2020

Hi Developers!

This is a release of how did we improve the Developers Community in June 2020. The key features:

- markdown export and markdown support in replies,
- all the site settings and subscription settings support multi-language.

See the details below.

### Markdown export

With this release, every post has a markdown export button. You can find it in the top-right corner of every post.

The screenshot shows a forum post interface. At the top, there's a header with 'Open Exchange App' and the title 'Import CSV programmatically from a file or from an URL using csvgen'. Below the title are tabs: 'View', 'Edit', 'Feature Content', 'Translation', and 'Devel'. The post is by 'Evgeny Shvarov' dated '30 May 2020'. The content starts with 'CSV, ObjectScript, ObjectScript Package Manager, InterSystems IRIS' followed by a video player showing '00:00' to '01:25' with '1' view. The text 'Hi Developers!' is visible. A red arrow points to a 'Markdown Export' button in the top right corner of the post content area. Other social media sharing icons and language selectors ('Es', 'Jp') are also visible.

And, the reply editor has a markdown mode too.

### Multi-language settings

All the site settings and subscription settings now support all the languages (English, Spanish, Japanese) - so we fixed the situation when you want to subscribe to or unsubscribe from English, Spanish or Japanese notifications.

Also, we fixed a number of bugs, [see the kanban](#).

And planned a set of new features for [the next month](#).

Request new features, please!
