# How can I read a field from the second obx segment using objectsript

Hi, I am trying to read a field from the second obx segment but it keeps giving me an error.

Following is what I am trying:

```
s detval = pRequest.FindSegment("OBX(2)")  
s dep = detval.GetValueAt(2)
```

but it doesnt read it. Is there a different way to read the value?
