Ensemble namespace permission

Hi,

I am attempting to set up a security role for our support team so they can have read access to the production and messages.

I have given the role RW rights on the resource associated with the database. However, when I log into Management Portal and select "Ensemble", the "Available Ensemble namespaces" list is empty.

What permissions do i need to set to be able to navigate to the production?

Thanks in advance,

Carl

Edit:

Just in case it is of any future use to anybody; adding R permission on %DB_CACHESYS and %DB_HSSYS solved the problem of not being able to navigate to the production from the portal home page. Thanks to Alex at WRC for that one :)
