InterSystems Developers in Japanese!

Hi Developers!

Now it's time for all Japanese speaking users of our community!

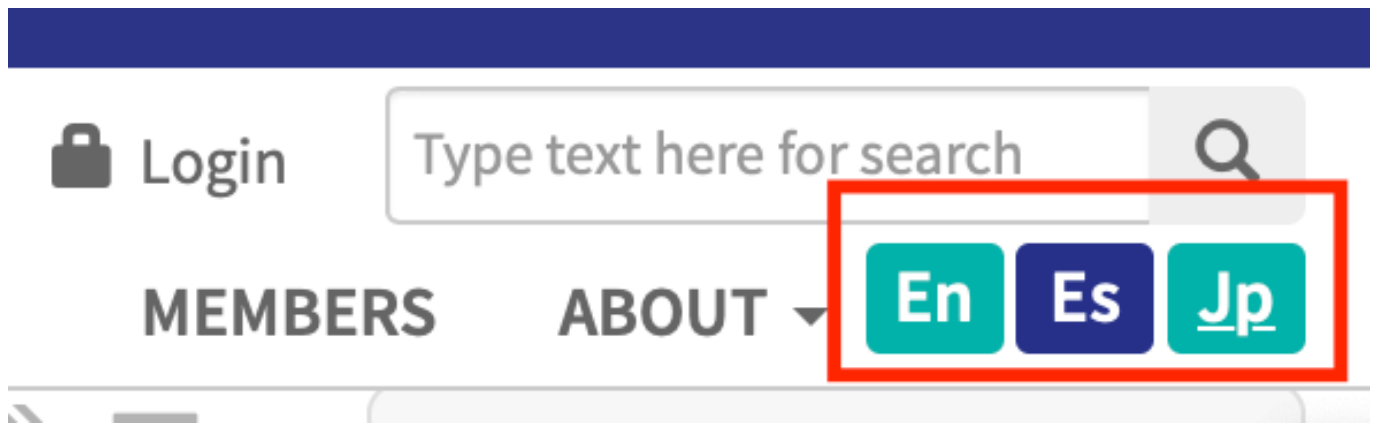

We're pleased to announce the official start of the [Japanese InterSystems Developer Community](#)!

And let me introduce you [@Minoru Horita](#) and [@Toshihiko Minamoto](#) from [InterSystems Japan](#) as managers of the InterSystems Developer Community in Japanese!

Here are the main points you need to know:

You can switch between sites using language buttons in the top right corner:

If you know Japanese, it's great that you can contribute articles, make discussions, ask and answer questions about InterSystems Data Platforms now in Japanese too!

Also!

You can use JP Language Switcher – the option to switch to the Japanese version of the article.

? OpenId() is slow, why?

Hi Community! I need your advice.

The method below is 6 times slower on production server than on developing machine:

Also!

If you posted an article in English it could be translated by anyone in Japanese and will be helpful for even more people!

Everyone is able now to add a translation to an [article](#) on the Developer Community. If you want to add a translation, request author's permission on the articles page in a Translation tab or if you already have a translation of the post, just provide the URL there:

OpenId() is slow, why?

Good day, DC Member!

In the Developer Community every post in English may have a translated version in another language which is linked to it. You need a permission of the original author to link the post-translation. [Learn more](#).

Click I want to translate the article to request Author on the permission and if you have the post already translated provide the URL.

URL to the translated post

Link to the translated question, if the question has already been translated.

日本語

Good day, DC Member!

In the Developer Community every post in English may have a translated version in another language which is linked to it. You need a permission of the original author to link the post-translation. [Learn more](#).

Click I want to translate the article to request Author on the permission and if you have the post already translated provide the URL.

URL to the translated post

Link to the translated question, if the question has already been translated.

[I want to translate the question](#)

If the author grants the request, you are able to publish the translation with your name on the Japanese Community site.

If you are an author, you'll receive an email notification of a request from a particular DC member. It's your decision whether to grant it.

If you want to translate your own article, request permission from yourself and grant it.

The same thing works for the Japanese Community site – you can translate the Japanese article in English. Be sure, you know both languages well!

So!

Don't hesitate to provide your feedback on how to make the Japanese InterSystems Community better!

Welcome to the [Japanese InterSystems Developer Community](#)!

And stay tuned!
