Question

[Yone Moreno](#) · Jul 21, 2020

## Are there any how-to or FAQs about Objectscript and Healthshare?

It would be interesting if there is some recommended documentation about best practices using Healthshare for interoperability.

Also, some how-tos or frequently asked questions about ObjectScript.

Or event better, if there are experienced developers who would like to share some common habits on their work with Studio / ObjectScript, which are valuable to do the developing work better.

For example, How to get the XML of a class and write it into a REST operation:

...

```
Method X(pRequest As Mensajes.ServiciosGeneralRequest, ...){
```

```
set writer=##class(%XML.Writer).%New()
```

```
set status=writer.OutputToString()
```

```
if $$$ISERR(status)
```

```
do $system.OBJ.DisplayError(status)
```

```
set status=writer.RootObject(pRequest)
```

```
if $$$ISERR(status) Do $system.OBJ.DisplayError(status)
```

```
set request = writer.GetXMLString()
```

```
$$$LOGINFO(request)
```

...

We would see:

```
<pruebacatalogo><codigo></codigo><descripcion>
```
