## Generating JSON & how to encapsulate a digit as a string

Hi,

How do I generate JSON strings instead of integers, as follows:

```
{ "MyProperty": "1" }
```

all we seem to be able to generate is

```
{ "MyProperty": 1 }
```

Its for an api that requires the former and as the former is valid JSON I'm surprised I am having so much trouble.

(Obviously I'm new, please be kind :D
