Failure Timeout and Reply action code SQL.OutboundAdapter

Hi:

I have an sql outbound adapter. Sometimes we have trouble connecting to the database.

The timeout in development is set to 15 seconds in live it is 150 seconds as it is an always connected Business operation.

I thought adding E=S or/and X=S would suspend the message. Why does it not?

Is the only way around then adding something to the business operation itself/ creating a customised SQL business operation rather than EnsLib.SQL.OutboundAdapter?

Thanks

Mark
