## Remove Trailing Squares from String

Hi,

Can anyone please explain me how to remove trailing squares from the text field (String). Trailing squares is a white space ?

I tried different things like Ltrim, Trim from sql query side and also from object scripting side something below.

```
If Address1 set Address1 = $ZSTRIP(Address1,"<>P,<>C,<>W")
```

```
If Address1 set Address1 = $ZSTRIP(Address1,"$C(9), $C(32), $C(160)")
```

```
If Address1 set Address1 = $ZSTRIP(Address1,"*W,*C")
```

Nothing works for me

Can anyone please help me to solve this

Thanks
