How do I do time comparison on IRIS 2020.1 using the W3C format?

I am trying to compare times on an IRIS instance. The times are in the W3C format (<https://www.w3.org/TR/NOTE-datetime>). Are there any in-built helper functions in IRIS to support time comparisons in this format or will I need to parse it using functions such as \$zdateh and \$ztimeh to do the comparisons?
