How to get Adapter property DISPLAYLIST values into SETTINGS parameter.

I am able to get a service class property DISPLAYLIST into the SETTINGS PARAMETER using the below example from the documentation but I am not able to get an adapter property in the same manner. Is there a way to obtain the DISPLAYLIST values from an adapter property into the SETTINGS Parameter?

for reference I am extending the adapter: [EnsLib.HL7.Adapter.TCPInboundAdapter](#)

Example from documentation:

```
selector?context={Ens.ContextSearch/getDisplayList?host=@currHostId&prop=Framing}
```

Thanks,

David
