How to handle raw byte data naturally

I have java language experience. If I need parse a binary tcp packet . like following format

encoded string and send it to peer by tcp

1byte msg type + 4 byte(unsigned int) + raw byte(body)

To parse this package , Some Java code like this:

```
byte[] data = new byte[1024];
```

```
ByteBuffer buf = new ByteBuffer(data)
```

```
byte type = buf.read()
```

```
int len = buf.ReadInt()
```

```
byte[] bodyBuff = new byte[len]
```

```
buf.Read(bodyBuff)
```

```
String str = new String(strBody)
```

So, does Objectscript have similar functionality to achieve similar results?

Tks.
