[Resolved] Task manager email notification

Hi,

I created a task from Management portal Task manager to use the Ens.Util.Tasks.Purge task . Task set up includes email notification setup for Completion email and error email.

Task Scheduler Wizard

This wizard helps to you schedule a task for execution by the Task Manager or to edit the details of a previously scheduled task. For user-defined tasks you must first create a new subclass of the %SYS.Task.Definition class which will then be selectable as a 'Task type'.

Task name: *

Description:

Namespace to run task in:

Task type: *

BodiesToo

KeepIntegrity

NumberOfDaysToKeep

TypesToPurge *

Task priority:

Run task as this user:

Open output file when task is running?

Output file:

Suspend task on error?

Reschedule task after system restart?

Send completion email notification to:

Send error email notification to:

This task is giving an error and no email is generated:

```
<CLASS DOES NOT EXIST>zSendMail+22%SYS.TaskSuper.1 *Security.SSLConfigs
```

I tested all other task types available from Ens.Util.task but all are giving the same error.

Not sure if this is this a bug or some missing configuration in the task setup ? Anyone noticed any similar issue or any idea how to fix this ?

Thank you for your help.

Regards,
