Replace ActiveX in ZEN interfaces running in Chrome and Edge?

Does anybody have a solution for replacing ActiveX in ZEN interfaces running in Chrome and Edge?

I am not able to modify security settings in either browser, hence looking for a replacement for those controls.

Sample1:

```
var loc = new ActiveXObject("WbemScripting.SWbemLocator");
var objWMIService = loc.ConnectServer(".", "root\cimv2");
var colItems = objWMIService.ExecQuery("Select * From Win32_Printer Where Default = TRUE" , "WQL", wbemFlagReturnImmediately | wbemFlagForwardOnly);
```

Sample2:

```
var loc = new ActiveXObject("WbemScripting.SWbemLocator");
var svc = loc.ConnectServer(".", "root\cimv2");
coll = svc.ExecQuery("Select * from Win32_ComputerSystem" );
var items=new Enumerator(coll);
var tUNC=(items.item().DNSHostName)+'.'+(items.item().Domain)
```

```
col2 = svc.ExecQuery("Select * from Win32_LogicalDisk where Name='U:' and DriveType=4" );
```

Thank you for all input.
