Requiring Information on CACHE and IRIS.

Hello there community,

I am pleased to say that i have started building a product and I have chosen InterSystems technology to be used in it.

But I have a confusion with regard to it.

I actually have to come to a conclusion to whether to use CACHE or IRIS.

I will be using a lot of data and also integrating it along with Python for DEEP and Machine Learning.

Also I do not have an idea of how to get the licensed version of either of that.

I would like to get hold of this and also would like to try out the free version of either Data Bases before moving on to large scale production.

So please help me out with it.

Thanks a lot in advance.

[#Python](#) [#Caché](#) [#InterSystems](#) [IRIS](#)
