New Video: Use Case: Connecting Devices to IRIS for Health to Improve Patient Care

Hi Community!

Enjoy watching the new video on [InterSystems Developers YouTube](#):

[Use Case: Connecting Devices to IRIS for Health to Improve Patient Care](#)

Integrating devices with InterSystems IRIS for Health™ can open the doors to new ways of using data to improve patient care. This integration equips physicians with data, stores the data to be analyzed to predict and prevent possible health issues, and provides the opportunity to transform data to be used by other applications. Watch the following video to see how InterSystems IRIS for Health can be used to predict potential congenital heart defects in newborns by integrating with a device, specifically an oximeter.
