How to share resources among Csp Process?

I want to call some Java Remote Call through Java gateway. The call code as following:

```
class CallRemote Extends %CSP.REST {
```

```
Method Index() as %Status {
```

```
Try
```

```
    set gw = createJavaGateway()
```

```
    Do callJavaMethod(gw)
```

```
    do gw.%Disconnect()
```

```
Catch {
```

```
}
```

```
}
```

```
}
```

But Every call need connect to Java Gateway and disconnect it. But It's cost too high(about 80ms)

So, According to my Java experiences, I need create some connection and put it into global static ConnectionPool

But I don't known how to reach that using ensemble.
