Cache Procedure with multiple inserts

I am trying to create a Procedure in Caché, but this message is showing:

```
<UNDEFINED>frmit+118^%qaqpsq *mt("v",1)
```

This is the procedure:

```
CREATE PROCEDURE testebi.sp_cargainicial()
BEGIN
  INSERT INTO testebi.Fato_Atendimentos (
    PK_OsProcedimento )
  SELECT ID
  from dado.TbIOsProcedimento  ;

  UPDATE testebi.Fato_Atendimentos as A SET PrimeiraOS = 1
  FROM
  (select min(convert(int,data)) data, paciente
  from dado.arqordemservico
  group by paciente) as b
  WHERE a.fk_paciente = b.paciente and a.fk_Data = b.data;
end
```

It works if I try to create the procedure with only the INSERT or with UPDATE part like this:

```
CREATE PROCEDURE testebi.sp_cargainicial()
BEGIN
  UPDATE testebi.Fato_Atendimentos as A SET PrimeiraOS = 1
  FROM
  (select min(convert(int,data)) data, paciente
  from dado.arqordemservico
  group by paciente) as b
  WHERE a.fk_paciente = b.paciente and a.fk_Data = b.data;
end
```

Have you ever see this error?
