Unable to set DG1 segment after cloning

My segment is not getting set with the new value though It goes into the if statement Am I doing something wrong?

```
ClassMethod Clone(pRequest As EnsLib.HL7.Message) As EnsLib.HL7.Message [ Final ]

s cREQ = pRequest.%ConstructClone()

s DG1 = cREQ.FindSegment("DG1",.ind)

While (ind2'="")

{
s diag = DG1.GetValueAt(4.1)

if diag = "O"
{
s tmp = "No code"
s rc=DG1.SetValueAt(tmp,4.1)
}

}

s DG1 = cREQ.FindSegment("DG1",.ind2)

s request = cREQ
Quit request

}
```
