How do you store, then find and insert example functions and methods into your programs?

Hello developers!

Share the best practices: 1) saving frequently used code sections, 2) quickly finding it, and 3) quickly including it into the current program?

There was a thought for 1,2 to use DC(this resource), but the search is not always convenient [not only for me](#)

The idea on the surface is to use the git repos wiki.

Are there any other best practices?

There is a project github [awesome](#).

Maybe we should include the awesome-objectsript sections in it?

And in the future for vscode to develop a plugin for awesome-objectsript ?
