Extracting XML string with separator embedded in text

Trying to extract "x, y", and only the "x" is being extracted because the "," is the separator

The ":" is set to extract everything after this

"Working Example": xyz,

"Not Working Example": "x, y",

```
$EXTRACT($P($P(pData,"",78),":",2),2,$L($P($P(pData,"",78),":",2))-1)
```

Any ideas on how to extract the whole field on the example with the "," in the field
