Terminal error

Hello!

I have installed windows 10 and cache 2018.1.0.184.0

I run terminal not from cache cube but through localDemon.exe (for report outputting from my programs to excel).

All worked fine but after some time error occurred "Cannot load supporting modules" (in attached file) and localDemon.exe is not launching.

But terminal from cache cube is still launching without problems (but from it reports are not working, localDemon.exe is required)

I thought it is windows defender or antivirus put some localDemon.exe module to quarantine but quarantine is empty.

I thought it is windows firewall and I added localDemon.exe for exceptions list but it did not help.

Maybe somebody knows why localDemon.exe stopped launching?
