ERROR #00: (no error description) in Management Portal Display Mode

Hi Community,

I have a property in a class, properties Initial Expression set to 1 `Property Test As %Status [InitialExpression = "1"];`, while updating the property we have set to 0 through code. If I look the field in Logic Mode its shows 0 but in Display and ODBC mode why it shows, ERROR #00: (no error description). Does this Error cause any problem? What are the reasons for this error #00? Kindly help.

Thanks in advance.
