Displaying Trace statements in DTL Editor Testing Tool (EnsPortal.Dialog.TestTransform.cls)

Someone may have asked this before but is there a way to return the **TRACE** statements that we have placed in the Data transformation within the **DTL Editor Testing Tool (EnsPortal.Dialog.TestTransform.cls)**? Is this something we can get in an Enhancement request in for?

It would save sometime in troubleshooting where an error might be in the DTL.

Just wondering...

Thanks

Scott
