## POCT01-A protocol for glucose monitoring devices?

Hi

Has anyone used Health Connect/Ensemble to receive results directly from POCT devices (Glucose monitors etc)?

I've been looking for information on the POCT01-A protocol, and as far as I can tell it is a HL7v3 XML schema, I should be able to get results from these devices, though I expect I need a webserver endpoint. (though I can't find any reference in the Health Connect documentation)

Does anyone have any knowledge of this?

KR

Stephen

EDIT: from the silence I'm wondering if this is normally handed off to specialist middleware?
