Extract a file from a multipart form or api using ReadMIMEMessage

If you want get a file from a multipart API or html form request use ReadMIMEMessage, see my sample.

```
Class dc.Test.TestService Extends Ens.BusinessService
{
    Parameter ADAPTER = "EnsLib.HTTP.InboundAdapter";
    Method OnProcessInput(pInput As %GlobalBinaryStream, pOutput As
    %RegisteredObject) As %Status
    {
        Set file=##class(%Stream.FileBinary).%New()
        Set file.Filename="/tmp/automl11.png"
        Set reader = ##class(%Net.MIMEReader).%New()
        //Set message = ##class(%Net.MIMEPart).%New()
        Do reader.OpenStream(pInput)
        Set tsc2 = reader.ReadMIMEMessage(.message)
        Do message.ClearHeaders()
        Do file.CopyFromAndSave(message.Body)

        Set tSC=$$$OK
        Set pOutput = "success"
        Quit tSC
    }
}
```
