Create Database using Python

I am trying to create a database using python. The example shows setting a Name string and a Properties object containing Directory=.

```
; Use class methods to create an instance
%SYS>s Name="ABC"
%SYS>s Properties("Directory")="c:\abc\"
%SYS>s Status=##Class(Config.Databases).Create(Name,.Properties)
%SYS>i '$$$ISOK(Status) w !,"Error="_$_SYSTEM.Status.GetErrorText(Status)
```

How do I update and pass the Directory property using Python?
