## is there a command to delete patient from Edge Production

Hi

We have Edge Production where we uploading flat files clinical data, and during testing we do this for several rounds load data, test them and reload them. So everytime we have to generate differnet patient data or change MRNs etc. So request is is there a command to delete patient records that will remove from the tables, and delete reference in the registry as well.

Any guidance that you follow for testing backload data and delete loaded data, pls share

[#Databases](#) [#Data Import and Export](#) [#HealthShare](#)
