New CCR UI Going Live for all Users on Dec 3

I am very pleased to announce that tomorrow (Dec 3) at 9 AM Cambridge time we plan to enable the new CCR UI for all users. No downtime should be required for the go-live. Existing beta testers will not see any change, but for non-beta testers the new Frost-based Angular UI will replace the legacy CSP-based application for the home page, navigation, System Details, and several other parts of the application.

We have had over 100 people from a wide variety of organizations beta testing this new interface for many months now, and we confident that it will be well received. The new UI covers the following areas of the application:

- Masthead/Side Navbar
- Home Page
- System Details
- Org Details
- Org Import
- User Details
- User Import
- CCR Reports

Additional parts of the application will be converted over the coming months.

Customers using CCR are encouraged to ask questions / provide feedback directly on the CCR group within the InterSystems Developers Community:

<https://community.intersystems.com/tags/ccr>

We're excited about this important milestone! Thank you to everyone who has provided feedback during beta testing to improve the user experience!!
